                                                                                                                                                                                                                                                                                                                                                                                                                          à
                                                                                                                                                           The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular traspets for diagnosis and prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P aeruginosa nucleic acid, as components of effective antibacterial targets, as tamplates for antibacterial drugs, including anti-p. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences of Pseudomonas species using blochip technology. Sequences ABD01397-CABD17867 represent P. aeruginosa polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed sequence. Sequence at the patent did not form part of the printed sequence. Sequence of the printed sequence them!

proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway the gene product or that has an activity against a biological pathway conquired for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiocic; (10) profilling a product is oversxpressed or underexpressed; (12) determining the extent or product as oversxpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains, or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for for cellular proliferation to isolate candidate molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the trarget prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operor required for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Zyskind JW;

The invention relates to an isolated nucleic acid comprising any one of the invention relates to an isolated nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promiter operably linked to the mucleic acid nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid of the propertied or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding cell polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding cell proliferation or the activity of agene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or the product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene or which each of the strains is present in a culture or collection of product is overexpressed or underexpressed, (12) determining the extent compound that inhibits the confounce of an organism. The antisense nucleic acids are useful for strains; or (13) identifying the target of a compound that inhibits the confounce of an organism. The antisense nucleic acids are useful for for displace molecic acids are useful for for a dentifying proteins or screening for homologous nucleic acids required for collection of an organism. The antisense nucleic acids are useful for for a dentifying the isolate candidate molecic acids are useful.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              352

This invention describes a novel method for the fermentative production

of methionine by growing a sulphur-producing Coryneform bacteria that

expresses at least one heterologous nucleic acid encoding a protein with

methionine synthase (MetH) activity. Methionine accumulates in the medium

or the cells. The method can be used to produce an L-methionine-

containing animal feed additive by culturing an L-Met-producing

microorganism, removing water from the resulting botch, removing 0-100%

of the biomass formed and drying the product to produce the feed additive

cof the biomass formed and drying the product to orduce the feed additive

in powdered or granular form. The nucleic acid encoding MetH has sequence

con monlogy less than 100% with respect to the meth coding sequence of

corynebacterium glutamicum ATCC 1302. Optionally at least one other gene

in the methionine biosynthesis pathway (e.g. aspartate kinase,

corynebacterium sultands ac that it is not affected by metabolites. Also

at least one metabolic pathway that reduces production of methionine is

cat least parelly switched off (e.g. homoserine kinase, threonine

produce L-methionine, useful as an additive for animal feeds. More

corynerally sulphur-containing fine chemicals are useful in human and

method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polynucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of abscrerial diseases, as components of antibacterial vaccines, as targets for antibacterial drugs or as bio-control agents for plants. This sequence represents a Proteus mirabilis polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GGTCCGACTAATAAGACACTCTCTGTGTCCCCATCTGTGGAAAGGCCGGATTATAGGAAC

Submitted (12-NOV-2004) MIPS, Ingolstaedter Landstr.1, D-85764
Neuherberg, GERNANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s. Wiemann@dkfz-heidelberg.de;
sequenced by Medigenomix (Martinsried/Germany) within the cDNA
sequencing consortium of the German Genome Project.
This clone (DKFZ968P116) is available at the RZPD Deutsches
Ressourcenzentrum fuer Genomforschung GmbH in Berlin, Germany.
Please contact RZPD for ordering:
http://www.rzpd.de/cgi-bin/products/cl.cgirCloneID=DKPZp46SP1116
Further information about the clone and the sequencing project is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1388
lst strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster 740.f
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1028
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1088

This is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by DKFZ (German Cancer Research Center,
Heidelberg/Germanny) within the cDNA sequencing consortium of the
German Genome Project.
No sl sequence available.
This clone (DKFZp313F151) is available at the RZPD in Berlin.

This is the 5' sequence of the clone insert Clone from S. Wiemann,
Molecular Genome Analysis, German Cancer Research Center (DKFZ);
Bmail s.wiemann@dkfz-heidelberg.de; sequenced by Qiagen
(Hilden/Germanny) within the CDNA sequencing consortium of the
Germann Genome Project. This clone (DKFZ65910322) is available at
the RZDD Deutsches Reseourcensentrum fuer Genomforschung GmbH in
Berlin, Germany. Please contact RZPD for ordering:
http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKFZ646910922
Further information about the clone and the sequencing project is
available at http://mips.gsf.de/projects/cdna/.

Sequence 1, Application US/08980326

Patent No. 6703197

GENERAL INFORMATION:

APPLICANT: Gravel, Roy A.

APPLICANT: Gavel, Rima

APPLICANT: Leclerc, Daniel

APPLICANT: Campeau, Eric

TITLE OF INVENTION: HUMAN METHIONINE SYNTHASE: CLONING, AND

TITLE OF INVENTION: HUMAN METHIONINE SYNTHASE: CLONING, AND

TITLE OF INVENTION: HUMAN METHIONINE SYNTHASE: CLONING, AND

TITLE OF INVENTION: CARDIOVASCULAR DISEASE AND CANCER

FILE REFERENCE: 50004/002003

CURRENT APPLICATION NUMBER: US/08/980,326

CURRENT APPLICATION NUMBER: 60/050,310

EARLIER FILING DATE: 1997-11-26

EARLIER FILING DATE: 1997-06-20

EARLIER PELICATION NUMBER: 60/031,964

EARLIER PELICATION NUMBER: 60/031,964

EARLIER PELICATION NUMBER: 100/031,964

EARLIER FILING DATE: 1996-11-27

NUMBER OF SEQ ID NOS: 75

SOFTWARE: FREESEQ FOR WINGOWS VERSION 3.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1, Ap
